

201 Stainless Steel Cable Tray Models

AI Overview

SS201 cable trays are available in ladder, perforated, solid-bottom, wire mesh, and channel designs, suitable for indoor, dry environments with minimal corrosion risk. Overview of SS201 Stainless Steel Cable Trays SS201 is a cost-effective stainless steel option with low nickel content and added manganese for strength. It is stronger but less flexible than SS304 and SS316L, making it suitable for indoor, dry environments such as offices, schools, and commercial buildings. SS201 is prone to rust in wet or salty conditions, so it is not recommended for outdoor or coastal applications. Common Types of SS201 Cable Trays

Ladder Cable Tray Features two side rails connected by rungs, resembling a ladder. Provides excellent ventilation and heat dissipation. Ideal for heavy-duty power cables and long horizontal runs. Commonly used in industrial plants and overhead installations.

Perforated Cable Tray Flat bottom with ventilation holes and raised side rails. Offers moderate airflow and better cable support than ladder trays. Suitable for control, instrumentation, and power cables in commercial and industrial settings.

Solid-Bottom Cable Tray Fully enclosed bottom for maximum cable protection. Shields cables from dust, moisture, and electromagnetic interference (EMI). Best for sensitive data, communication, or fiber optic cables in laboratories or data centers.

Wire Mesh (Basket) Cable Tray Constructed from welded steel wires forming an open mesh. Lightweight, flexible, and allows easy cable routing and modifications. Ideal for low-voltage, telecommunication, and fiber optic cables in IT offices, hospitals, and data centers.

Channel Cable Tray U-shaped or channel-like structure for light-duty cable runs. Compact and cost-effective, suitable for short cable runs in control rooms or small commercial installations.

Material Considerations SS201 trays are less corrosion-resistant than SS304 or SS316L due to lower nickel content. They are harder to weld and less flexible, but they are economical for environments with minimal moisture o...
