

8501 Optical Module

Overview

NEC's NR8501 Series are InGaAs avalanche photo diode (APD) coaxial modules with optical fiber pigtail. They are designed for long wavelength 2.5 Gb/s optical communication systems and are ideal as a receiver for Synchronous Digital Hierarchy (SDH) system, STM-16 ITU-T. FTE8501K1LTN - Transceiver Module from Coherent. The modules comply with the QSFP28 MSA, IEEE 802. The Multiple Quantum Well (MQW) structure is adopted to achieve stable dynamic single longitudinal mode operation over wide temperature range of 0 to +65 °C. 039" (1mm) Codewheel/Codestrip 8-SMD Module from Broadcom Limited. It is designed for on-line monitoring of. The FiberManager™ System frame is based on a modular and totally integrated design which allows the user to expand and grow its fiber management system one frame, one module, one fiber termination at a time. The fiber termination module integrates connector mounting, splicing and fiber storage into.
