

Analysis of TCC Curve for Relay Protection

Overview

Online relay coordination study tool for TCC curves, overcurrent and earth fault settings, transformer and fuse coordination, selectivity checks and reports. Visualize Time-Current Characteristic (TCC) curves on a log-log plot with IEC 60255 IDMT curves (SI, VI, EI, LTI), real-time CTI verification, fault sweep animation, and automatic TMS optimization. Supports LV to transmission voltage levels with 5 professional presets and exportable coordination. Time-current curves (TCCs) graphically depict the interrupting time curve of a protective device based on the available fault current on a log-log-based graph. is industry-standard power system analysis software used for relay coordination studies.
