

Cable clamps for cable tray fixing

AI Overview

Cables are secured on cable trays using specialized clamps that provide structural support, prevent movement, and ensure safety. Types of Cable Tray Clamps

- Hold-Down Clamps:** These clamps secure individual cables directly to the tray surface. Heavy-duty versions can attach trays to beams or C-channels without drilling, using set screws for a firm hold (MP Husky).
- Fixing Clamps:** Designed for fastening cable ladders or trays to support channels, such as OE cable ladders or SPB-RF trays. They come in sizes like M10/6 or M10/10 depending on the tray type and support requirements.
- C-Clamps and Channel Clamps:** Used to attach trays to I-beams, wide flange beams, or standard channels. They can handle loads from 300 lbs to 500 lbs depending on the clamp type and material.
- Accessories:** Additional components like brackets, couplers, tees, and crosses help manage cable direction, support, and spacing on the tray.

Installation Guidelines

- Positioning:** Place the clamp over the cable or tray section to be secured. Ensure the cable is properly aligned and not under tension.
- Fastening:** Use the provided bolts, nuts, or screws to attach the clamp to the tray or support channel. For beam clamps, set screws often eliminate the need for drilling.
- Spacing:** Install clamps at regular intervals to prevent sagging or movement. The spacing depends on cable weight, tray type, and load capacity.
- Material Considerations:** Stainless steel clamps (AISI 300 series) are preferred for corrosion resistance, especially in outdoor or industrial environments.
- Grounding:** Some clamps, particularly those made of copper alloy, can provide grounding for the cable system. Ensure proper electrical continuity if grounding is required.

Best Practices

- Avoid over-tightening to prevent cable damage.
- Use clamps compatible with the tray type (solid-bottom, ventilated, or ladder tray).
- Consider load ratings to ensure clamps can support the combined weight of cables and trays.
- For complex installations, use accessories like brackets and couplers to maintain proper cable ro...
