

Can a fiber optic HG260 bridge a router

Overview

ONU bridge Mode, often called transparent mode, allows the device to function purely as a bridge between the optical network and user equipment. It does not perform routing, NAT (Network Address Translation), or DHCP services. Yes, you can often use your existing router with fiber optic internet, but there are crucial considerations. Understanding compatibility, potential limitations, and when an upgrade is necessary will ensure you get the most out of your high-speed connection. This guide will break down everything you. Bridge mode is a special router mode that disables the router functionality so you can use your ISP's combination router-modem unit solely as a modem paired with your own router. Why Use Fiber Optic Internet?

Before diving into the setup, let's quickly recap why fiber optics are worth the effort: Lightning-fast speeds (up to 1 Gbps or higher).
