

Comparison of IP67 ratings for steel cable trays in Malaysia

AI Overview

IP67-rated steel cable trays in Malaysia provide dust-tight protection and can withstand temporary immersion in water, making them suitable for outdoor and industrial environments. Understanding IP67 for Cable Trays The IP67 rating follows the IEC 60529 standard, where the first digit "6" indicates complete protection against dust, and the second digit "7" indicates protection against temporary immersion in water up to 1 meter for 30 minutes. This makes IP67 steel cable trays ideal for environments exposed to rain, splashes, or accidental submersion, but they are not designed for continuous underwater use or high-pressure washdowns.

Comparison with Other IP Ratings IP68: Provides protection against continuous submersion, but the depth and duration vary by manufacturer. IP68 is more suitable for permanent underwater installations, unlike IP67. IP69K: Designed for high-pressure, high-temperature washdowns, common in food processing or automotive industries. IP69K does not guarantee immersion protection, so it is not a direct substitute for IP67. For steel cable trays, IP67 is generally sufficient for outdoor, industrial, and chemical plant applications where temporary water exposure is expected, but IP68 or IP69K may be required for specialized conditions.

Steel Cable Tray Options in Malaysia Several Malaysian suppliers offer IP67-rated steel cable trays: Array Metal: Provides a wide range of steel and stainless steel cable trays with competitive pricing and international quality standards. NK Synergy: Offers steel, stainless steel, and FRP cable trays suitable for corrosive environments, including chemical plants and offshore platforms. Legrand Malaysia: Supplies steel cable trays with CE marking and compliance with European directives, ensuring quality and durability. Practical Considerations Material and Finish: Stainless steel or galvanized...
