

Cost of changing indoor electrical distribution box

AI Overview

Replacing a standard indoor electrical distribution box typically costs between \$1,100 and \$1,800, depending on amperage, labor, and complexity.

Typical Cost Breakdown

Materials: A standard 100–200 amp panel with 8–20 circuits usually costs \$250–\$500 for the box and breakers, depending on brand and type (plastic vs metal, standard vs tamper-resistant).

Labor: Electricians charge \$75–\$150 per hour, with a typical replacement taking 4–8 hours for straightforward indoor installations. Labor often accounts for the largest portion of the total cost.

Permits and Inspections: Local permits and inspection fees can add \$100–\$200 to the project.

Cost Ranges by Complexity

Basic Replacement: For a 100A, 8-circuit panel with no upgrades, expect \$1,100–\$1,600.

Mid-Range Upgrade: A 150A, 12-circuit panel with minor conductor replacements or code updates can cost \$1,500–\$2,500.

High-End or Extensive Upgrades: Replacing a 200A panel, adding circuits, or performing major rewiring can reach \$2,500–\$4,500+, especially if structural modifications or meter work are required.

Factors Affecting Cost

Amperage: Higher amperage panels (200A or more) cost more due to larger breakers and heavier wiring.

Accessibility: Panels located behind walls, appliances, or in tight spaces increase labor time.

Wiring and Code Upgrades: Older homes may require rewiring or conduit work to meet current electrical codes, adding to labor and material costs.

Regional Labor Rates: Urban areas typically have higher hourly rates than suburban or rural locations.

Summary

For a standard indoor electrical distribution box replacement in a typical U.S. home, budgeting \$1,100–\$1,800 is reasonable for a straightforward job. More complex upgrades, higher amperage, or code compliance work can push costs up to \$4,500 or more. Always include permit fees and consider hiring a licensed electrician...
