

Does Iran have electricity

Overview

Iran, heavily reliant on revenues, has some of the largest reserves of oil and natural gas in the world, but it struggles with energy shortages due to poor planning, outdated infrastructure, and the impact of international sanctions. Despite these challenges, Iran's government has failed to modernize its electricity sector, leading to frequent power outages and energy crises throughout the year. One of the main issues exacerbating Iran's energy shortages is the rampant smuggling of fuel. The governme.

AI Overview

Iran does have electricity, but it is currently facing a systemic energy crisis characterized by shortages of electricity, natural gas, and refined products . In response to this crisis, electricity distribution companies have announced rolling blackouts in Tehran and other provinces, indicating that electricity availability is significantly affected .
