

Dominic Secondary Distribution Box Description and Price

AI Overview

A Dominic secondary distribution box typically costs between \$1,200 and \$4,500, depending on specifications, installation, and location.

Price Range and Factors

The cost of a secondary distribution box varies widely based on several factors:

- Amperage and Voltage Rating:** Higher-capacity boxes (e.g., 150–200A) cost more than standard 100–125A units due to larger components and increased safety requirements.
- Indoor vs Outdoor Installation:** Outdoor-rated boxes with weatherproof enclosures are more expensive than indoor units.
- Material and Construction:** Durable materials like steel or heavy-duty composites increase the price, while basic plastic or lighter metal boxes are cheaper.
- Number of Circuits and Features:** Boxes with more circuits, integrated breakers, smart monitoring, or remote control capabilities command higher prices.
- Labor and Permits:** Installation complexity, wiring length, and local permit requirements can add \$500–\$1,500 or more to the total cost.

Typical Cost Scenarios

- Basic Residential Unit:** 100A indoor panel with standard breakers and wiring, total cost around \$1,200–\$2,000 including labor and permits.
- Mid-Range Upgrade:** 150–200A outdoor box with weatherproof enclosure, new main disconnect, and moderate rewiring, total cost \$2,800–\$4,500.
- High-End or Custom Installation:** Heavy-duty industrial or commercial boxes with advanced monitoring, multiple circuits, and complex installation can exceed \$5,000, depending on customization and site conditions.

Additional Considerations

- Energy Efficiency:** Units with advanced load management or power monitoring may have higher upfront costs but reduce long-term energy expenses.
- Accessibility and Site Conditions:** Difficult access, trenching, or retrofitting in older buildings can significantly increase labor costs.
- Regional Variations:** Labor rates, permit fees, and delivery costs vary by region, aff...
