

Energy Russia Construction

Overview

In 2023 Russia's construction produced \$320 billion, with 78% on time delivery amid rising energy efficiency. Yet behind that. Over half the energy in Russia is from fossil gas and almost a quarter from oil. Energy consumption across Russia in 2023 was 1,162. Russia is a leading global exporter of oil and natural gas [better source needed] and is the fourth highest greenhouse emitter in the world. In 2019. Note: Energy intensity of primary energy is an indication of how much energy is used to produce one unit of economic output. Source: World Development Indicators. The latest International Energy Agency (IEA) World. Following an annual growth of 7% in 2023, GlobalData expects the Russian construction industry to contract by 4.
