

Export Micro-module Server Room Rack Type

AI Overview

Micro-module server racks are modular, prefabricated rack clusters designed for rapid deployment with integrated power, cooling, security, and monitoring systems. Overview of Micro-Module Server Racks Micro-module server racks, also called micro-modules, are small, self-contained rack clusters that can operate independently within a larger data center environment. They typically consist of two rows of back-to-back or face-to-face IT racks, along with UPS, cooling equipment, and cabling, forming a closed aisle to isolate hot or cold air flows for efficient thermal management . These units are prefabricated, tested in the factory, and can be rapidly assembled on-site, requiring only power, network, and minimal cooling infrastructure to become operational .

Key Features

- Rack Construction:** Heavy-duty steel with powder-coated finish; optional IP54 or IP55 protection for dust and water resistance . Standard racks are usually 19-inch cabinets, compatible with most IT equipment .
- Cooling:** Precision cooling is integrated to manage heat directly at the IT equipment, often using closed cold or hot aisle configurations to maximize airflow efficiency .
- Power Distribution:** Smart PDUs with environmental probes, temperature, and humidity sensors ensure reliable power delivery and monitoring .
- UPS & Batteries:** Provide clean, uninterrupted power to critical IT infrastructure .
- Monitoring & Management:** Local touchscreen displays (e.g., 7-inch) allow real-time monitoring of power, thermal conditions, and remote management .
- Fire Detection & Suppression:** Integrated systems for early detection and suppression of fire hazards .
- Security:** Access control with card readers and physical security measures to protect equipment .

Types and Standards

- Closed Cold Aisle:** Front of the rack is sealed to direct cold air to IT equipment efficiently .
- Closed Hot Aisle:** Rear of the rack is sealed...
