

Fiber optic cable 1km

AI Overview

A 1 km fiber optic cable is ideal for medium to long-distance data transmission, with prices in India ranging from INR 25,000 to INR 50,000 depending on type and features.

Types of Fiber Optic Cable

- Single-mode fiber (SMF)** is designed for long-distance, high-speed transmission with minimal signal loss, making it suitable for telecom backbones, data center interconnects, and 10Gbps+ applications over 1 km.
- Multi-mode fiber (MMF)** is more cost-effective for short-range connections, such as campus networks or office buildings, but may limit future upgrades to higher speeds.
- Armored cables** provide extra protection against physical damage, ideal for outdoor, underground, or industrial environments, while unarmored cables are cheaper but less durable.
- Hybrid indoor/outdoor cables** are also available for mixed environments.

Pricing

In India, a 4-core fiber optic cable for 1 km typically costs INR 25,000 to INR 50,000, depending on quality, manufacturer, and features. Armored or higher-core-count cables, such as 24-core armored fiber, can cost around INR 8 per meter, totaling approximately INR 8,000 for 1 km. Bulk orders often receive discounts, and installation costs (labor, equipment, permits) can add 10–30% to the total budget.

Applications

1 km fiber cables are commonly used for:

- Telecom infrastructure and ISP backbones
- Campus networks connecting multiple buildings
- Data center interconnects
- Industrial or outdoor installations requiring durability

Installation Tips

- Perform an optical loss test (OLTS) after deployment to ensure signal integrity.
- Use proper cleaning tools for connectors.
- Install cable markers for future maintenance, especially for outdoor or buried runs.
- For future-proofing, single-mode fiber is recommended for 10Gbps or higher speeds.

Choosing the right fiber type, core count, and protection level is crucial for balancing performance, durability, and cost when deploying a 1 km fiber optic cable.
