

Headlight High Beam Control Module Icon

AI Overview

The high beam control module is typically represented by a blue headlight icon with horizontal lines projecting outward, indicating full beam activation.

Common Headlight Symbols

- High Beam Indicator:** A blue icon showing a headlight with straight horizontal lines extending forward, often located on the dashboard or control stalk. It lights up when high beams are active and serves as a reminder to switch back to low beams when approaching other vehicles.
- Low Beam Indicator:** Usually a green or white icon with a headlight and downward-slanting lines, indicating standard headlights are on for normal night driving.
- Automatic Headlights:** Represented by an "A" or "Auto" symbol, often in green, white, or orange, showing that the vehicle's lights adjust automatically based on ambient light conditions.
- Adaptive Front-Lighting System (AFS):** A symbol combining an "A" with a headlight, indicating headlights that adjust direction based on steering and speed.
- Front Fog Lights:** A headlamp icon with wavy lines pointing downward, used in foggy conditions to improve visibility.
- Rear Fog Lights:** Similar to the front fog light symbol but with a "tail" or lines pointing backward, alerting drivers behind you in poor visibility.
- Daytime Running Lights (DRL):** Often a small headlight icon that illuminates automatically during the day to increase vehicle visibility.
- Bulb Warning Symbol:** Indicates a malfunction or burnt-out headlight bulb, usually depicted as a headlight with an exclamation mark or a filament icon.

Usage Notes

High beams are generally activated by pushing the stalk forward or pulling it toward the driver for a flash, while low beams must be on first. The dashboard icon lights up to confirm high beam activation, helping prevent accidental glare to oncoming traffic. Understanding these symbols ensures safe operation of your vehicle's lighting system and compliance with traffic regulations.
