

How much does it cost to protect a construction site electrical distribution box

AI Overview

Protecting a construction site electrical distribution box typically costs between \$6 and \$300 per unit, depending on the type of cover, material, and installation requirements.

Distribution Box Costs The base cost of an electrical distribution box varies widely depending on size, capacity, and material. Standard residential or small commercial boxes can range from \$4 to \$30 for basic enclosures, while larger industrial or weatherproof boxes may cost \$100 to \$1,000 or more due to higher amperage capacity, circuit slots, and protective features. Outdoor-rated or weatherproof boxes carry a premium because they must withstand environmental conditions like rain, dust, and temperature fluctuations.

Temporary Protection Options On active construction sites, temporary covers are often used to protect live electrical panels and junction boxes. These covers prevent accidental contact, block dust and debris, and help meet safety regulations.

Plastic covers: Lightweight, affordable, and suitable for low-traffic areas or indoor use. Costs typically range from \$6 to \$20 per cover.

Metal covers: More durable, ideal for high-traffic zones or outdoor sites exposed to weather. Prices generally range from \$20 to \$50 per cover, with heavy-duty or lockable options reaching \$100 or more.

Installation and Labor Costs Installing or securing protective covers may involve labor, especially for larger or outdoor boxes. Typical installation costs for a standard box range from \$120 to \$260, while more complex setups with multiple circuits or outdoor weatherproofing can reach \$800 to \$1,600, and high-end industrial installations may exceed \$3,000. Labor costs depend on local rates, complexity, and whether additional safety features...
