

How to configure a switch to convert a network cable port to a fiber optic port

Overview

Insert a compatible SFP transceiver into the converter's port, making sure it matches the network's media type and speed. Then, connect one end of the fiber cable to the transceiver and the other to the appropriate port on a switch, router, or another media converter. A standard setup typically includes the fiber optic. Media converters are essential networking devices that enable seamless signal conversion between different cable types, most commonly between copper twisted-pair cables (e., Cat5e or Cat6) and fiber optics. Media converter is mainly designed to break out the. This allows you to connect devices that use different types of cabling, such as a computer with an Ethernet port to a network switch with a fiber optic port. If you're looking to learn how to configure fiber optics on a Cisco switch, it's important to first configure the switch settings so it's ready for fiber optics.
