

How to cut copper sheets for a distribution box

AI Overview

Cut copper sheets safely and accurately using the right tools, proper marking, and protective gear. **Safety First** Before starting, always wear safety glasses to protect your eyes from metal fragments and thick gloves to prevent cuts from sharp edges. Work in a well-ventilated area and secure the copper sheet on a stable surface to avoid slipping or bending during cutting. **Tools Based on Copper Thickness** **Thin sheets (24–30 gauge):** Use aviation or tin snips for straight or curved cuts. These are ideal for light fabrication and small distribution box panels. **Medium sheets (18–22 gauge):** Use a bench shear, jeweler's saw, or fine-toothed jigsaw. These provide more control for precise cuts without deforming the metal. **Thick sheets (10–16 gauge):** Use rotary tools with metal cut-off wheels or an angle grinder with a thin metal disc. Clamp the sheet securely to prevent vibration and rough edges. **Step-by-Step Cutting Process** **Measure and Mark:** Use a measuring tape and fine-tip marker to draw the cut lines clearly on the copper sheet. Double-check measurements to ensure accuracy. **Secure the Sheet:** Clamp the copper sheet to a workbench or use a bench pin to support it. This prevents bending and ensures a straight cut. **Cutting:** **For snips:** Position the snips at the edge of the sheet and make steady, overlapping cuts along the line. Support the offcut to avoid tearing. **For power tools:** Use a fine-toothed blade or abrasive disc designed for non-ferrous metals. Guide the tool slowly along the marked line, letting the blade do the work. **Deburr Edges:** After cutting, smooth sharp edges with a metal file to prevent injury and ensure a clean fit in the distribution box. **Tips for Best Results** **Lubricate blades** with beeswax or cutting oil to reduce friction and achieve smoother cuts. **Avoid forcing the tool;** let it cut at its own pace to prevent jagged edges or bending. **Support the sheet continuously,** especially for lon...
