Overview

The required width is at least 30 inches or the width of the panel, whichever is greater. It doesn't have to be centered on the panel—you can offset it left or right. The National Electrical Code (NEC) provides comprehensive safety standards for electrical installations, including requirements for electrical panels (main service panels and subpanels or breaker box). NEC Article 408. That box must stay completely clear—no shelves, pipes, or storage—so an electrician can work safely without risk of contact with live parts or losing footing. The three-foot working depth gives you. NEC requires junction boxes to meet size (box fill), material, accessibility, and grounding rules (per Articles 314 & 300). Whether in a home or an industrial facility, this box keeps your electrical setup organized, functional, and efficient. Just like travelers need clear pathways and safety protocols, your electrical circuits need proper management to prevent chaos.
