

Huijue Cable Tray Wiring Cable Model

AI Overview

Huijue cable trays are designed to support and organize electrical wiring, available in steel, stainless steel, and aluminum, with specifications tailored for industrial and commercial applications. Materials and Construction Huijue cable trays are typically manufactured from high-strength steel, stainless steel (AISI 316L), or aluminum alloys, depending on the application environment. Steel trays may be pre-galvanized or hot-dip galvanized for corrosion resistance, while aluminum trays offer lightweight construction and excellent atmospheric corrosion resistance. Stainless steel trays include molybdenum-enhanced alloys for improved resistance to chlorides and harsh environments. Wire mesh or perforated designs are common, providing ventilation and electromagnetic interference protection for sensitive instrumentation cables.

Types of Cable Trays

- Ladder Tray: Ideal for heavy-duty power cables, providing high strength and easy cable support.
- Perforated Tray: Suitable for medium loads, allows airflow to prevent heat buildup.
- Solid Bottom Tray: Used where visual aesthetics or protection from dust and debris is important.
- Wire Mesh Tray: Lightweight, flexible, and suitable for light instrumentation and control cables.

Dimensions and Load Considerations

- Run spacing: Typically 150–230 mm (6–9 inches) to maintain cable support and prevent sagging.
- Width and depth: Varies according to cable volume; common widths range from 100 mm to 600 mm, and depths from 50 mm to 150 mm.
- Bend radius: Minimum bend radius must be maintained for cables exiting the tray to prevent damage.
- Load capacity: Depends on material, tray type, and span between supports; steel trays generally support heavier loads than aluminum or wire mesh trays.

Cable Compatibility

Huijue cable trays are compatible with a wide range of wiring, including:

- Power cables (THHN, XHHW, or similar)
- Instrumentation and control cables
- Data and communication cables

Cables can be installed directly in the tray, supported by messenger wires, or secured with ties, and trays can be used in indoor...
