

Installation price of in-home electrical distribution box

AI Overview

The typical cost for installing a residential electrical distribution box ranges from \$450 to \$1,500, depending on box type, amperage, labor, and regional factors.

Cost Breakdown

Material Costs: Standard single-gang or small residential boxes: \$25–\$200 for the box itself, with plastic boxes being the cheapest and metal or weatherproof boxes costing more. Full panel boxes for typical 100–125 amp service: \$150–\$1,000 depending on amperage, number of circuits, and features.

Labor Costs: Installation labor typically ranges from \$75 to \$300 for simple replacements, but more complex installations or upgrades can increase labor costs significantly. Labor rates vary by region, with urban and coastal areas generally higher than rural or Midwest locations.

Additional Costs: Permits and inspection fees may add \$50–\$200 depending on local regulations. Upgrades such as new wiring, additional conduits, or higher-capacity breakers can increase total costs.

Typical Total Costs

Basic replacement of a small indoor box: \$125–\$320 total, including labor and materials.

Standard residential panel installation (100–125 amp): \$450–\$1,500 total, including breakers, wiring, and professional installation.

Outdoor or weatherproof distribution boxes: \$150–\$300+ for smaller units, with larger or specialized units costing more due to materials and installation complexity.

Factors Affecting Price

Box Type and Material: Plastic is cheapest, metal or weatherproof boxes cost more.

Amperage and Number of Circuits: Higher amp ratings and more circuits increase both material and labor costs.

Installation Complexity: Relocating a box, upgrading wiring, or adding safety features raises labor costs.

Regional Labor Rates: Urban and coastal areas typically have higher electrician rates.

Permits and Code Compliance: Local regulations can add to the total cost.

In summary, a homeowner can expect to pay \$450–\$1,500 for...
