

Installation price of outdoor single-door distribution box

AI Overview

The total cost for an outdoor single-door distribution box installation typically ranges from \$200 to \$600, depending on box type, amperage, and labor.

Cost Breakdown
Materials: A standard outdoor single-door distribution box, especially a waterproof IP65-rated unit, can cost between \$50 and \$250 depending on size, material (plastic or metal), and features like DIN rail compatibility or UV stabilization for sun-exposed installations. Basic single-gang metal boxes for residential use are on the lower end, while larger or more durable enclosures for industrial or high-amperage applications are more expensive.
Labor: Electrician labor typically ranges from \$85 to \$125 per hour, with most installations taking 1-3 hours for a standard outdoor single-door box. Labor costs can increase if the installation site is difficult to access, requires conduit rerouting, or involves additional wiring.

Permits and Additional Costs: Depending on local regulations, permits may be required, adding \$50-\$150 to the total cost. Additional components like breakers, GFCI/AFCI devices, or surge protection can add \$20-\$50 per device.

Total Estimated Price
Low-end installation: \$200-\$300 (basic box, standard labor, minimal wiring)

Mid-range installation: \$300-\$450 (IP65 waterproof box, moderate wiring, standard labor)

High-end installation: \$450-\$600+ (larger or high-amperage box, complex wiring, premium materials, additional protective devices)

Factors Affecting Price
Box Material and Rating: Outdoor-rated, waterproof enclosures (IP65-IP68) cost more than indoor or non-waterproof boxes.
Amperage and Circuit Capacity: Higher amperage panels or multi-circuit boxes increase both material and labor costs.
Accessibility and Wiring Complexity: Concrete walls, long conduit runs, or difficult access can raise labor costs by 15-30%.
Regional Labor Rates: Costs vary by location; urban areas and regions...
