

Installation price of standard three-level distribution box

AI Overview

The installation price of a standard three-level distribution box typically ranges from \$1,000 to \$3,500, depending on specifications, labor, and site conditions.

Cost Breakdown

Equipment Cost Standard three-level distribution boxes, suitable for residential or light commercial use, vary in price based on material, amperage, and number of circuits. Typical units can cost \$400 to \$1,500 for the box and internal components such as breakers and wiring.

Installation Labor Labor costs depend on site complexity, accessibility, and regional wage differences. For a standard installation, labor can range from \$450 to \$2,200, with more complex setups (e.g., deeper trenches, multiple outlets, or driveway crossings) increasing the cost.

Permits and Miscellaneous Fees Electrical permits, delivery, and minor materials add \$50 to \$350 to the total project cost.

Outdoor-rated or weather-resistant enclosures may carry a premium.

Total Estimated Price Combining equipment, labor, and permits, a standard three-level distribution box installation generally costs \$1,000 to \$3,500. For simpler residential setups, the lower end of the range is typical, while commercial or complex installations approach the higher end.

Factors Affecting Price

Material: PVC or HDPE enclosures; HDPE is more expensive but durable.

Amperage and Phase: Higher amperage or three-phase systems increase cost.

Site Conditions: Trenching depth, soil type, and accessibility affect labor.

Customization: Special mounting, labeling, or integration with building management systems can raise costs.

Regional Variations: Labor and permit fees vary by location, with the Northeast and West Coast generally higher than the Midwest or Southeast.

Investing in a quality distribution box ensures long-term reliability, safety, and reduced maintenance costs, making the upfront expense worthwhile.
