

Intelligent PDU Fault

Overview

Smart PDU solutions give you the tools to move from reactive to predictive maintenance. You can use data from sensors and monitoring systems to anticipate problems before they cause downtime. This approach helps you keep your network running smoothly and reduces the risk of unexpected. Intelligent PDUs, (Power Distribution Units), are essential components of data centre infrastructure that enable remote management and monitoring of power distribution. This document is intended for use by customers and company representatives who are using the web interface to monitor the iPDU.
