

Ireland Solution Special Optical Cable OM5

AI Overview

OM5 multimode fiber cables in Ireland provide high-speed, bend-insensitive connectivity for 40G/100G networks with extended wavelength support and LSZH/LSOH safety features. Overview of OM5 Fiber OM5 is a wideband multimode optical fiber designed to support Shortwave Wavelength Division Multiplexing (SWDM) across 850–953 nm, enabling higher data rates over existing multimode infrastructure. It is backward compatible with OM4 and OM3 fibers, allowing seamless integration with legacy 50/125 µm fiber systems. OM5 fibers are optimized for VCSEL-based 40G and 100G networks, providing enhanced signal quality and extended reach compared to OM4. Key Features Bend-Insensitive Design: OM5 fibers, such as Corning ClearCurve, withstand tight bends and challenging cabling routes, reducing signal loss in data centers and in-building networks. High Bandwidth: Maintains the same bandwidth at 850 nm as OM4 fibers, supporting high-performance laser-based systems. Connector Types: Commonly available with LC/LC duplex connectors, suitable for patch leads and fiber cords. Safety Jacket: LSZH (Low-Smoke, Zero-Halogen) or LSOH jackets minimize smoke, toxicity, and corrosion in case of fire. Color Identification: Corning ColorPro® technology simplifies inventory management and cable identification. Extended Wavelength Support: Supports 850–953 nm for SWDM and 1300 nm for LED sources, enhancing flexibility in network design. Applications OM5 fiber is ideal for: Data centers requiring 40G/100G Ethernet connectivity High-speed LANs and enterprise networks Shortwave WDM systems for maximizing multimode fiber capacity Environments with tight bends or complex cabling routes Availability in Ireland Farnell Ireland offers OM5 LC-LC multimode patch leads and fiber cords, such as the FODLC-OM5-25 and LCLCL-25M-OM5-FIBER, with f...
