

Manufacturing of Stainless Steel Ladder Cable Trays

Overview

This manual is designed to guide workers through the detailed production process of ladder cable trays, including the manufacture of horizontal elbows, tees, crosses, reducing bends, and vertical bends, with emphasis on precision, safety, and quality control. Below is a general overview of the typical steps involved in the manufacturing process: 1. Mild steel (for most common trays) 2. What's Involved in Producing Ladder. C-Channel Swage Ladder trays are prefabricated metal structures that consist of two side rails connected by individual transverse members or rungs. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore. We also. In addition, Cable tray systems are the right solution for running large quantities of data cables overhead or under-floor. A series reflects connected component products for individual purchase. Straight sections are available in multiple heights, lengths and widths.
