

OPGW optical cable straight material

Overview

Prysmian's aluminium-clad stainless steel OPGW provides a compact design without sacrificing corrosion resistance. It is best suited to applications with moderate to low span and electrical requirements. The fibres are loosely buffered in a tube containing an oval, spiralling, hollow channel filled with jelly. Wire strands are replaced with fibre-filled stainless steel tubes. Fibre tubes are helically twisted. An optical ground wire (also known as an OPGW or, in the IEEE standard, an optical fiber composite overhead ground wire) is a type of cable that is used in overhead power lines. Such cable combines the functions of grounding and telecommunications. An OPGW cable contains a tubular structure with. Fiberon OPGW is one of the most reliable fiber optic mediums for the telecom service providers, ISPs, Cable TVs, or other organizations who are involved in the transmission of one or more form of voice, data, video, text, messages, conferencing and telemetering kind of things. We have been developing fittings for fib data transmission in such cables takes place via modulated.
