

Price list for cable trays with span

AI Overview

Cable tray prices vary by material, type, and span, ranging from \$0.80 to over \$76 per unit for industrial applications, with standard lengths typically around 2.4 meters (8 feet).

Price Overview

B2B Bulk Pricing: Industrial cable trays on platforms like Alibaba range from \$0.80 to \$76, depending on material (stainless steel, aluminum, galvanized steel, FRP) and tray type (ladder, perforated, wire mesh). Bulk purchases reduce per-unit cost but require larger initial investment.

B2C Retail Pricing: Smaller-scale consumer prices, such as on Amazon, range from \$15 to \$34 per tray, suitable for office or home installations.

Standard Lengths: Most ladder-type trays are sold in 2.4-meter (8-foot) sections, with fittings priced per piece. Wire mesh trays and I-beam designs may have lengths up to 3 meters or more, optimized for long-span installations.

Material and Type Considerations

- Hot-Dip Galvanized Steel:** Common for ladder trays; durable and corrosion-resistant.
- Stainless Steel (SS 304):** Fireproof and suitable for industrial or high-safety applications.
- Aluminum:** Lightweight, ideal for long spans with minimal support.
- Wire Mesh Trays:** Flexible routing, easy installation, and suitable for complex configurations.

Span and Installation Notes

Long-Span Trays: Aluminum I-beam and wire mesh trays are designed for long spans, reducing the number of supports needed and simplifying installation.

Fittings and Accessories: Splices, covers, and clips are sold separately, typically per piece, and are essential for maintaining structural integrity over long spans.

Ease of Installation: Products with snap-in splices or no-drill clamps reduce labor costs and installation time.

Summary

When budgeting for cable trays, consider material, tray type, standard length, and span requirements. For industrial projects, bulk B2B purchases offer cost efficiency, while retail B2C options are suitable for smaller installations. Long-span trays like aluminum I-beam or wire mesh reduce support needs and installation complexity, which can impact overall project cost.
