

Price of 45-degree bend in cable tray

AI Overview

The price of a 45-degree cable tray bend depends on the tray width, duty rating, and material, with medium-duty bends typically starting around £15-£50 per unit and heavy-duty galvanised steel bends costing more, often £50-£120 per unit. Factors Affecting Price

Duty Rating: Medium-duty bends are suitable for lighter cable loads and smaller widths (50mm-750mm) and are generally less expensive. Heavy-duty bends are made from hot-dipped galvanised steel for industrial applications and higher load capacities, which increases the cost.

Tray Width: Wider trays (e.g., 450mm or above) require more material and fabrication effort, raising the price.

Material and Finish: Galvanised steel bends offer corrosion resistance and durability, which adds to the cost compared to plain steel or medium-duty options.

Quantity and Trade Pricing: Bulk orders or trade purchases often receive discounted pricing. Suppliers like Direct Channel UK recommend contacting their sales team for bulk or custom pricing.

Additional Features: Some bends come with built-in couplers for easier installation, which may slightly increase the unit price.

Supplier Guidance Direct Channel UK: Heavy-duty 450mm HDG steel 45° bends; trade pricing available on request. MIDFIX: Medium-duty 45° bends, widths 50mm-750mm; pricing varies by width. Channel & Tray: Medium-duty bends with built-in couplers; suitable for fixed angular changes. Edwardes: Offers daily deals on medium-duty 45° bends; prices fluctuate based on stock and promotions.

Recommendation For an accurate quote, provide the supplier with: Tray width Duty rating (medium or heavy) Quantity required Material preference (galvanised or plain steel) This ensures you receive a precise price for fabrication and delivery.
