

Price of Integrated Fiber Optic Fusion Splice Box

AI Overview

Fiber optic fusion splice boxes are priced between \$0.25 and \$36 per unit, depending on type, capacity, and supplier. Fiber optic fusion splice boxes, also known as splice enclosures or termination boxes, are used to secure and organize fiber splices in network installations, protecting delicate fibers and ensuring long-term reliability . Prices vary widely based on material, fiber capacity, and design. For example, basic ABS plastic boxes suitable for small-scale FTTX networks can start as low as \$0.25 per unit, while more robust or higher-capacity models can cost up to \$36 per unit . Factors affecting price include: Fiber capacity: Boxes can accommodate 6, 12, 24, or more fiber strands . Material and durability: Options include ABS plastic, engineering plastics, aluminum, or steel, with some models rated for outdoor use (IP65) and UV/impact resistance . Design features: Swing-out trays, two-layer designs, and integrated PLC splitters can increase cost . Mounting type: Wall-mount or rack-mount enclosures may differ in price . Supplier and order volume: Wholesale purchases often reduce per-unit cost, while retail or specialized models may be higher . For example, a 12-port wall-mount splice box designed for FTTH networks with IP65 rating and two-layer tray management typically falls in the mid-range of this pricing spectrum . Retail platforms like Amazon and Alibaba offer a variety of options, allowing buyers to select based on fiber count, environmental rating, and budget . In summary, when budgeting for fiber optic fusion splice boxes, expect unit prices from a few cents for basic models to around \$36 for higher-end or specialized enclosures, with features and capacity being the main determinants of cost.
