

Price of Mesh Cable Tray and Pressure Plate Cabling

AI Overview

Mesh cable tray pressure plates typically range from \$1 to \$10 per piece, depending on material, size, and supplier.

Pricing Overview

The cost of a mesh cable tray pressure plate depends on several factors:

- Material:** Stainless steel (304 or 316) is more durable and corrosion-resistant, costing more than pre-galvanized steel, which is suitable for indoor use in dry areas.
- Size and Thickness:** Larger or thicker plates designed for heavy-duty trays will be priced higher. Standard small plates for data or light power cables are usually at the lower end of the range.
- Supplier Type:** B2B suppliers like Alibaba offer bulk pricing as low as \$0.80 per unit, while B2C suppliers such as Amazon or Grainger may charge \$2-\$10 per piece depending on brand and shipping.
- Finish:** Hot-dip galvanized (HDG) plates for outdoor or industrial use are more expensive than pre-galvanized (PG) plates due to thicker zinc coating.

Market Context

Wire mesh cable trays themselves are lightweight, easy to install, and cost-effective compared to conduit systems. Pressure plates are used to secure cables within the tray, ensuring proper routing and preventing movement. The price of these accessories is generally a small fraction of the total cable tray system cost, but quality is important to avoid cable damage or corrosion.

Sourcing Tips

- Bulk Orders:** Purchasing in bulk from industrial suppliers can significantly reduce per-unit cost.
- Material Selection:** Choose stainless steel for long-term durability in humid or outdoor environments; pre-galvanized steel is sufficient for indoor office or data center applications.
- Compatibility:** Ensure the pressure plate matches the tray width and mesh spacing to provide secure cable support.

In summary, expect \$1-\$10 per pressure plate, with lower prices for bulk industrial orders and higher prices for retail or specialized materials. Always verify material and size specifications before purch...
