

Price of Small Equipotential Distribution Boxes

AI Overview

Small equipotential distribution boxes typically range from \$10 to \$50 per unit, depending on specifications, materials, and features.

Pricing Overview

Small equipotential terminal boxes, such as the TD28 model, are designed for general equipotential bonding and local connections. Prices for these compact units generally start around \$10–\$20 for basic models with standard copper strips and metal enclosures, while more robust or certified units can cost up to \$50 or more depending on material quality, copper strip thickness, and additional safety features.

Factors Affecting Price

Material Construction: Boxes made from stainless steel or high-grade thermoplastics are more durable and command higher prices.

Copper Strip Thickness: A thicker copper strip (e.g., 0.6mm) improves conductivity and safety, slightly increasing cost.

IP Rating and Safety Features: Units with IP65–IP68 ratings, surge protection, or residual current protection are priced higher due to enhanced protection against environmental factors and electrical hazards.

Size and Circuit Capacity: Small distribution boxes with 32A to 125A ratings and multiple circuits may cost more than simpler single-circuit units.

Mounting Type: Surface-mounted boxes are generally less expensive than flush-mounted or customized enclosures.

Applications

These boxes are widely used in residential, commercial, and light industrial installations to ensure electrical safety by maintaining equipotential bonding and proper grounding. They are suitable for industrial panels, server rooms, and local electrical connections where compact, reliable distribution is required.

Purchasing Tips

Compare OEM and ODM options for cost-effective solutions without compromising quality. Check for certifications such as CE, 3C, or UTEM to ensure compliance with safety standards. Consider bulk purchases for projects, as supplier...
