

Price of a secondary power distribution box on a construction site

AI Overview

A complete set of secondary power distribution boxes for construction sites typically ranges from \$500 to \$3,000 per unit, depending on capacity, material, and features.

Cost Overview The price of construction site distribution boxes varies widely based on amperage, number of circuits, material, and compliance with standards such as IEC 61439 and IEC 60364. Standard pre-wired assemblies like the ENERGYBOX range are designed for temporary or repeated use on construction sites and are made from durable technopolymer or sheet steel, offering fire resistance and portability. Small portable units (32A–63A, IP65) for light equipment or temporary lighting typically cost \$500–\$1,000 per box. Medium-duty units with multiple circuits, CEE sockets, and RCD protection for powering machinery or site lighting can range from \$1,000–\$2,000. Heavy-duty or customized solutions, including main and group distributors for cranes, pumps, or containerized construction setups, can exceed \$2,500–\$3,000 per unit, especially when pre-wired and tested by professional electricians.

Factors Affecting Price

- Material and durability:** Outdoor-rated boxes with IP65–IP67 protection and IK08–IK10 impact resistance cost more than indoor-rated units.
- Amperage and number of circuits:** Higher capacity boxes for three-phase power or multiple downstream distributors increase cost.
- Pre-wiring and testing:** Factory pre-wired units with documented testing are more expensive but reduce on-site labor costs.
- Customization:** Special socket configurations, mounting options, or integration with energy monitoring systems can add to the price.
- Compliance and certifications:** Units meeting international standards (IEC, EN) or local electrical codes may carry a premium.

Purchasing Options

- Direct from manufacturers:** Offers factory pricing and customization options, suitable for bulk orders.
- Pre-assembled kits:** ENERGYBOX an...
