

Price of venting gas from a distribution box

AI Overview

The cost of venting gas from a distribution box varies widely depending on the type of box, gas type, number of outputs, and safety features, typically ranging from a few hundred to several thousand dollars per unit. Factors Affecting Price

Type of Distribution Box

- Valve Manifold Boxes (VMBs):** Used in industrial or laboratory settings to distribute gases from a single source to multiple points. Prices depend on the number of sticks (1-8), manual vs. semi-automatic operation, and inclusion of safety controllers or PLC monitoring systems.
- Ground-Level Vent Boxes:** Used for venting ground gases beneath buildings. Costs vary based on size (circular or rectangular), modularity, and compatibility with passive venting systems.
- Gas Type:** Hazardous or specialty gases (e.g., semiconductor, medical, or pharmaceutical gases) often require more robust materials and safety features, increasing cost.
- Configuration and Capacity:** Modular systems allow expansion (e.g., 4-stick or 8-stick VMBs) and may include automatic purging or venting features. Larger or more complex configurations are more expensive.
- Ground vent boxes** may include adjustable inlet levels, sealed or soakaway outlets, and removable lids for maintenance, which can affect pricing.

Installation and Maintenance Costs also include installation, connection to gas lines or passive venting systems, and periodic maintenance for safety compliance. Labor and site-specific requirements can significantly influence total cost.

Typical Price Ranges

- Industrial Valve Manifold Boxes:** Small manual VMBs may start around \$500-\$1,500, while semi-automatic or fully modular systems with multiple sticks and safety controllers can range from \$2,000-\$10,000 or more depending on complexity and gas type.
- Ground-Level Vent Boxes:** Standard modular vent boxes for building gas venting typically range from \$200-\$1,000 per unit, depending on size, material,...
