

QSFP28 Broadcast Transmission Aggregation Switch

Overview

Designed with a high-performance chip architecture, the switch delivers 10G SFP+ ports and 100G QSFP28 uplinks, providing a powerful combination of high density access and ultra high speed aggregation. QSFP28 (Quad Small Form-Factor Pluggable 28) enables 100G transmission by aggregating four parallel 25G electrical lanes, delivering an optimal balance of bandwidth efficiency, power consumption, and deployment flexibility. Compared with legacy 40G QSFP+ modules, QSFP28 provides 2.5x higher. The QSFP28 port is at the heart of this transition. QSFP28 ports are now widely deployed in data centers, AI/HPC clusters, telecom backbones, and enterprise networks. They combine high bandwidth with backward. 1.8 Tbps high-density 100G/25G Layer 3 Etherlighting™ aggregation switch with MC-LAG support for high availability system design. Enterprise SONiC based 32 port 100G QSFP28 aggregation core switch for aggregation spine architecture, which line rate L2 L3 up to 3.2 Tbps, Marvell Falcon, ROCEv2 EVPN Multi homing supported.
