

The cables in the cable tray are all burned

Overview

When cable trays are overloaded, excessive heat build-up in and around live conductors can cause the insulation to break down, leading to potential shock hazards or fires. What happens if they catch fire?

How do you stop it?

Let's break down a real Cable Tray Fire Incident and share actionable fixes. Flames tore through 24m². The experimental program has two main thrusts—bench-scale measurements of small samples of burning cables and full-scale measurements of the heat release and fire-spread rates of cables burning within typical ladder-type trays. The cables are made up of a variety of thermoplastic (TP) and thermoset (TS). NEC Article 392 outlines the key rules for installing and maintaining industrial cable tray systems. However, they come with limits; exceeding these limits can lead to severe safety hazards.
