

Wall-mounted fixed distribution box

AI Overview

A wall-mounted fixed distribution box is an electrical enclosure installed on a wall to safely house circuit breakers, switches, and other control equipment for efficient power distribution.

Overview A wall-mounted distribution box is designed to be fixed directly onto a wall surface, providing a compact and accessible solution for electrical power distribution in homes, offices, and small commercial spaces. These boxes are typically made from metal (steel or aluminum) or high-grade plastic, offering durability, protection against dust, moisture, and accidental contact. Their elevated position keeps them away from water spills and foot traffic, making them safer and easier to access compared to floor-mounted units.
