

Waterproof electrical distribution box plastic

AI Overview

Plastic waterproof electrical distribution boxes with IP65 protection are ideal for safely housing household electrical circuits, protecting them from water, dust, and environmental exposure.

Key Features

Material: Most household waterproof distribution boxes are made from high-quality ABS or polycarbonate (PC) plastics, which are flame-retardant, corrosion-resistant, anti-static, and UV-stabilized for outdoor use. These materials ensure durability, impact resistance, and long-term reliability.

Ingress Protection (IP Rating): Look for boxes with IP65 or higher, which guarantees protection against dust and water jets, making them suitable for indoor and outdoor installations, including gardens, rooftops, and humid areas.

Design and Installation: Plastic boxes often feature pre-drilled or customizable holes, removable mounting panels, and compatibility with DIN rails for organizing breakers, terminals, or relays. They are lightweight, easy to install, and can be flush-mounted or surface-mounted depending on your household setup.

Sizes and Capacity: Household boxes come in various sizes, typically ranging from 4 to 39 ways, with single, double, or triple layers to accommodate multiple circuits. Compact models are ideal for tight spaces, while larger boxes provide extra room for wiring and accessories.

Safety and Standards: These boxes meet IEC standards (IEC 60529, IEC 60695-2-10) for electrical protection and flammability, ensuring safe operation in residential environments. Seals and gaskets maintain waterproofing even after repeated openings.

Additional Features: Some models include transparent covers for easy visual inspection without opening the box, and high-quality metal screws for secure, dustproof, and waterproof closure. UV-stabilized housings prevent yellowing or cracking in sunlight, making them suitable for outdoor exposure.
