

What type of switch is used in the access network equipment room

Overview

The access layer consists of layer 3 switches, which take routed and switched data packets from the distribution switches and then route them to the access devices in subnets. The access devices in subnets can be modems, video display units, receiver audio phones, IP-based. There are different types of enterprise switches that perform various roles in these layer-based or hierarchical ethernet networks. Both these switches play important role in the network. This guide will demystify these roles and help you understand their. A network switch is a vital component of a computer network that connects multiple devices, like computers, printers, and servers, within a local area network (LAN).
